

Percent Lead by Census Tract

Buildings in Ohio built prior to 1998 or that use plumbing material or solder manufactured before 1998 may have materials with greater than 8% lead and are at a higher risk of contributing lead to the drinking water than materials manufactured after 1998. In addition, buildings built and plumbing materials manufactured after 2014 were required to have less than 0.25% lead by weight and have the lowest risk for contributing lead to the drinking water. It should be noted however that, although prohibited, some use of leaded solder or leaded components may have occurred after the prohibitions became effective.

Percent of Cleveland Water Cityside Connections Suspected to be Lead

- Cleveland Municipal Boundary
- CWD Service Area
- Census Tract
- Highways

Cleveland Water has prepared this map using the best available information possible. We are continually updating the data used to generate this map in an effort to be transparent and in partial fulfillment of compliance requirements for Ohio EPA. While we believe the map is accurate in content and depiction, there are no warranties or guarantees, either expressed or implied, as to the completeness, accuracy, or correctness of the data portrayed in this product. Cleveland Water accepts no liability arising from incorrect, incomplete, or misleading information contained therein. All information, data and databases are provided "as is" with no warranty, expressed or implied, including but not limited to, fitness for a particular purpose.
